PROFESSIONAL SUMMARY

Olympian and Software Engineer building distributed backend infrastructure for multi-tenant SaaS: API gateway, access-control services, and shared platform components on GCP and Kubernetes, serving 100K+ users across 5 global regions at NCR Voyix.

SKILLS

Languages & Frameworks: C#, .NET, TypeScript, JavaScript, Python, SQL (PostgreSQL), React, Angular, HTML/CSS

Cloud & Infrastructure: GCP, Kubernetes, Helm, Docker, Terraform, GitOps, Pub/Sub, Cloud SQL, Firestore, Cloud Armor, Istio

Platform & APIs: Apigee X, REST APIs, OAuth 2.0/OIDC, Okta, Redis, SignalR, Hangfire, Elasticsearch, LaunchDarkly

Tools & Testing: Databricks, Playwright, Cypress, SonarQube, Git, Jira **Languages:** Turkish (Native), English (Fluent)

EXPERIENCE

NCR Voyix, Atlanta, GA

January 2025 – Present

Software Engineer

- Built shared platform services and React/Angular component libraries for NCR's multi-tenant SaaS ecosystem, standardizing authentication, MFA, organization context, and navigation across 30+ applications used by 20+ teams.
- Engineered backend access-control services in C# and .NET with Okta, securing 19M monthly API requests via OAuth 2.0, token validation, and role-based authorization; own deployment planning, security patching, and production hotfixes.
- Designed a distributed Redis caching layer for token introspection, the validation step on every authenticated request, reducing latency by 75% (200ms to 50ms) across 50K+ weekly requests and eliminating redundant calls to upstream identity services.
- Contributed to a partner-facing API gateway and real-time provisioning platform (Cloud Connect) built on event-driven, distributed workflows, enabling secure integrations for 500+ ISV partners and ~50,000 merchant locations.
- Developed a site-grouping and metadata system that lets enterprise customers organize 50K+ locations into dynamic, attribute-based collections, with Elasticsearch-backed search and location-based access control (LBAC) filtering results by user permissions.

NCR Voyix, Atlanta, GA

May 2024 – August 2024

Software Engineer Intern

- Expanded NCR Marketplace to 5,000+ SMBs by launching Google Business Profile integration in Angular, TypeScript, C#, and .NET with OAuth data flows for location syncing and claim mapping, reducing setup time by 60%.
- Cut partner onboarding time by 40% by delivering microservices-compatible data-migration workflows across the full SDLC, collaborating in Agile sprints and documenting integration requirements end-to-end.

UPS Capital, Atlanta, GA

May 2023 – December 2023

AI Engineer Co-op

- Reduced internal query resolution time for operations teams by building a full-stack AI chatbot on Databricks with Streamlit, MosaicML, and PyTorch, documenting system protocols for technical stakeholders.
- Accelerated 3PL integrations (including Pirate Ship) by leading component-based development of a microservices-ready claims-portal template in Angular, TypeScript, and SCSS, decoupling frontend from backend service logic.

PROJECTS

Sports Performance Intelligence Platform

- Created a full-stack analytics platform (React, Node.js, Python) with predictive data pipelines and real-time Chart.js dashboards delivering performance insights for Georgia Tech Swimming.

EDUCATION

Georgia Institute of Technology, Atlanta, GA

December 2024

- Bachelor of Science in Computer Science; Concentration: Artificial Intelligence & Media

LEADERSHIP

- Qualified for the 2021 Tokyo Olympic Games (Swimming).
- NCAA D1 Georgia Tech Swimming Student-Athlete; All-American; Fred Lanoue Athletic Achievement Award.
